DIAMANA® KAI'LI

For the player who wants the extreme stability and classic smooth feel associated with the original Diamana Blue Board.

Diamana Kai'li utilizes the unique combination of ultra-microscopic homogeneous composite material with Mitsubishi Rayon's patent pending Multi-Dimensional Interlay (MDI) design process to deliver the same versatility in shot making as the original profile, in a slightly more tip firm design with less torque, resulting in less spin.

MULTI-DIMENSIONAL INTERLAY (MDI) TECHNOLOGY

The Diamana Kai'li utilizes a revolutionary patent pending design process called Multi-Dimensional Interlay (MDI). By strategically positioning multiple layers of proprietary ultra-thin material at multiple angles of orientation throughout the length of the shaft, this design construction delivers unparalleled consistency and control by minimizing torsional deformation in both the butt-section during unloading and in the tip-section through impact.

**MULTI-DIMENSIONAL
INTERLAY
TECHNOLOGY**

FEATURE

- + Ultra-thin 50 μ sheets of prepreg
- + High density of carbon fiber used
- + Ultra-Microscopic Homogenous Composite

BENEFIT

- + Delivers a smooth and precise profile
- + Superior feel and feedback
- + Unmatched stability and consistency during swing loading and unloading
