**CRAFTED BY THE MIURA  
FAMILY SINCE 1957**

# THE MIURA WAY

World-renowned craftsman Katsuhiro Miura began hand crafting and grinding irons in 1957 and has since created one of the most respected brands in the golf industry.

Miura’s endless quest to create the perfect club has brought to the world over 10 product series, a number that grows as the next generation of the Miura family - led by sons Shinei and Yoshitaka - continue the meticulous refinement and evolution of their product lines.

## FORGING

The forging process begins when steel billets are heated to 1200°C and the first two strikes are delivered, improving the precision of the forging process.

The next step involves another precision strike of the club head within a die. The head is heated to a temperature of 800 – 900°C. By allowing the club head to cool and then be reheated, the shape of the head is maintained, while allowing the grain structure within the club head to be manipulated.

Following the initial forge, the stamping process takes the stage. The most challenging technique is the stamping of scoring lines and grooves while simultaneously maintaining the club head's performance integrity. A critical process, the scoring lines become the basis for the loft, lie and offset of each iron.

The hosel is then attached to the club head by a "spin forged" technique. Spun at high speed, the friction between the hosel and head melds the two components — a forging process that is unique in the industry.

These techniques produce a golf club that is unparalleled.

## GRINDING

To ensure a consistent look, Miura developed a procedure for the initial "profile" grind which allows each club head to be ground to perfection.

When grinding the face of the club head, particular attention is paid to delivering the optimum groove shape and subsequent performance as dictated by the R&A and the USGA.

## POLISHING

Once the grinding process is complete, the club heads are polished in barrels with small smooth stones. Miura craftsmen then eliminate any imperfections that remain.

Finishes such as satin, chrome, matte black, or raw all demand different polishing preparations and are created using specific buffing wheels.

The final step in the forging process is the paint fill of the club head. Followed by a final check for any imperfections, the factory can confidently ship a finished product the Miura family can be proud of.

# IRONS

LAUNCH DATE | February 20<sup>th</sup> 2018

MC-501

The MC-501 (Muscle Cavity) combines the playability of a blade with the forgiveness of a cavity back. Incorporating the iconic “Y” Grind created by Yoshitaka Miura, the MC-501 delivers solid ball contact and will appeal to players beyond the low-handicapped golfer.

CB-2008

The CB-2008 has evolved out of technological advancements in manufacturing, enabling the Miura family to integrate a forged face and neck with a SUS composite pocket cavity. This mid-sized masterpiece has a low center of gravity, delivering shots with high stable trajectory and Miura’s renowned feel and performance.

# GOLF BAGS

Tour Bag

The Tour Bag is available in both black and white. Inspired by staff professionals looking to make a statement on the golf course, this bag has all the premium features and benefits of a superior golf bag.

COLOR

- Black w/ White Logo
- White w/ Black Logo

DETAILS

- 10” top
- 6-way steel ring reinforced top
- Total of 7 pockets including velour-lined valuables pockets
- Spacious belly pocket for storing
- 2 water bottle pockets
- Single strap with single or 3-way connection
- Includes all-weather rainhood

## Stand Bag

This premium Stand Bag uses the most advanced strap and stand system to provide you with the best carrying experience on the course. It features the patented Rotator Stand technology, producing maximum stability.

### COLOR

● White w/ Black Logo

● Black w/ White Logo

### DETAILS

- 8.5" top
- 6-way top with genuine leather handle
- Total of 6 external pockets including a cooler pocket, a velour-lined valuables pocket and a large garment pocket
- Featuring patented Rotator Stand technology allowing maximum stability
- Includes rain hood cover

## Lite Carry Bag

One of the lightest full-featured carry bags on the market, weighing in at 3.5 lbs. From the carbon fiber legs to the exoskeleton base frame, every detail is engineered for the highest level of performance.

### COLOR

● Black w/ White Logo

### DETAILS

- 7.5" 4-way top w/ full-length dividers
- Ultra lightweight rip-stock nylon
- 6 pockets w/ water resistant zipper
- 4-point adjustable strap
- Patented Rotator Stand technology allowing maximum stability
- Premium carbon fiber legs
- Nylon rainhood
